

## **Online books catalog in Clojure**

igorjov@gmail.com

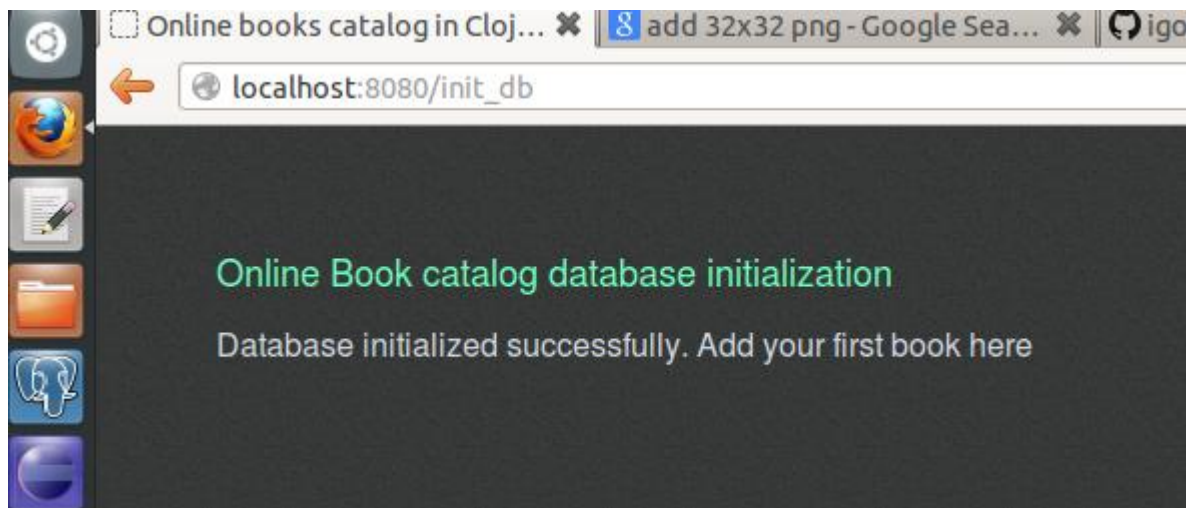

2014

When you run an application, navigate browser to <http://localhost:8080>

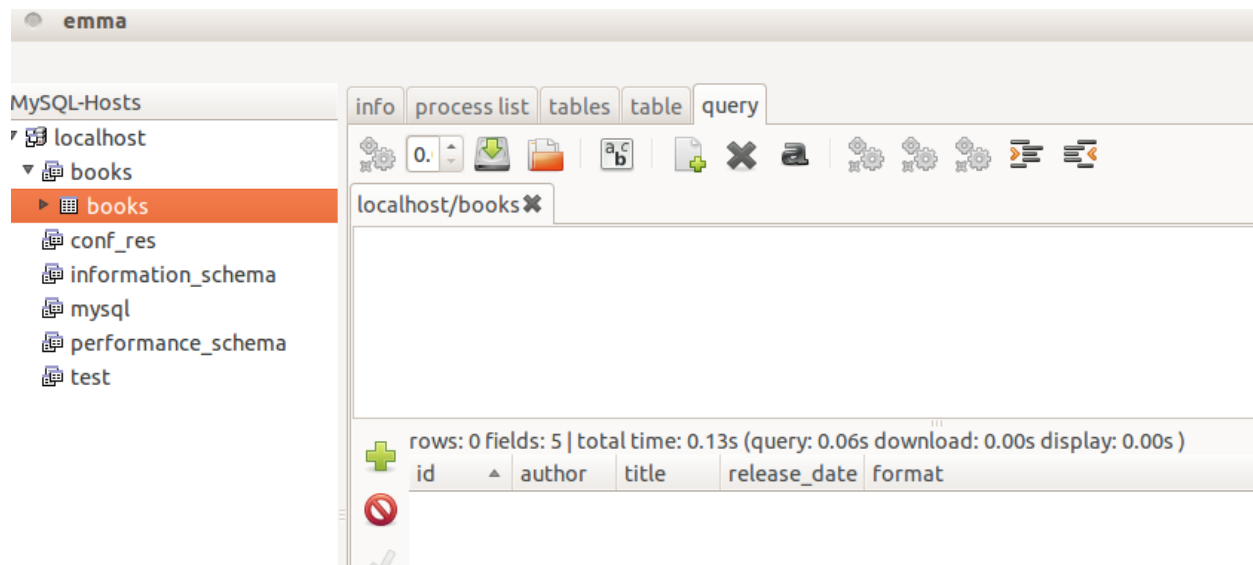

Default view should appear:

On first login, we need to initialize database by using *Initialize database* link.

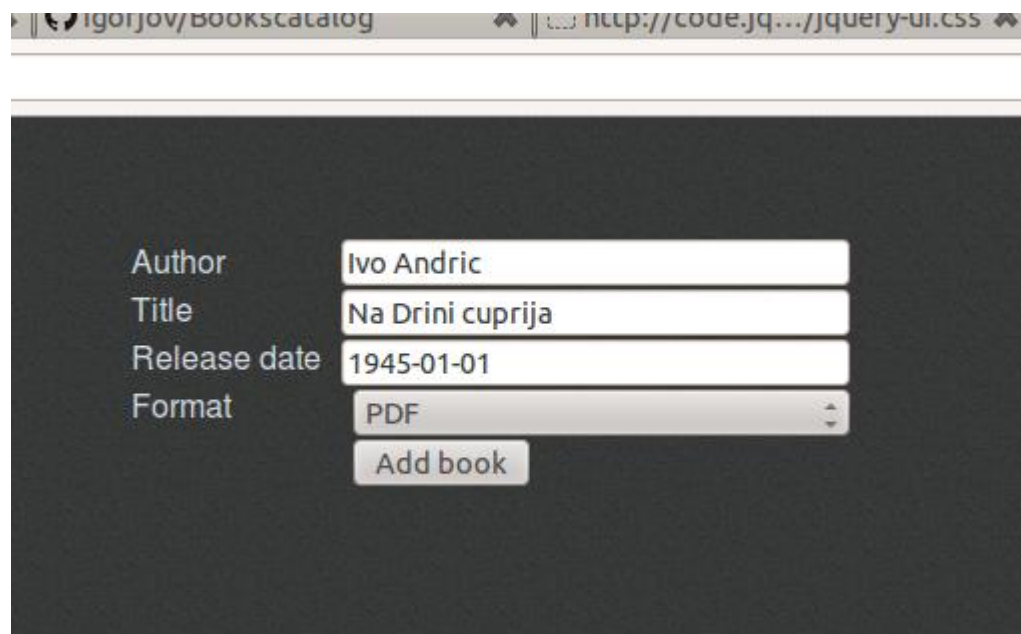

For this, we need to have MySQL server up and running. This option will create empty table structure in database:

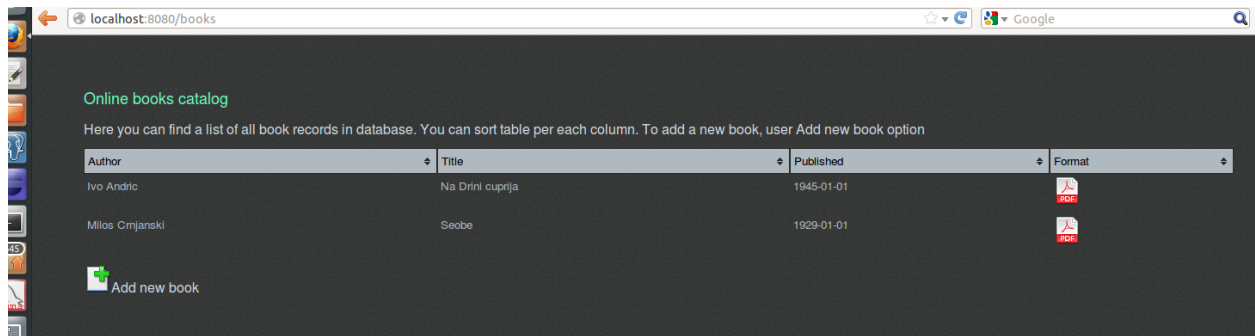

MySQL connection parameters could be found at `/src/Bookscatalog/model/backend.clj`

Once when database is initialized successfully, you can add a new book by following link [Add your first book](#).

When we finish adding a new records, we are able to browse the catalog:

Navigation links:

<http://localhost:8080> - Default page with all possible links

[http://localhost:8080/init\\_db](http://localhost:8080/init_db) - Database init option

<http://localhost:8080/books> - Browse books catalog

[http://localhost:8080/add\\_book](http://localhost:8080/add_book) - Add new book to the catalog
